Association for Computing Machinery Conference Proceedings Style: Numbered References

The ACM conference proceeding citation style is a divergent style that is used in various ways throughout the ACM conference proceedings. The below examples serve as guidelines for the use thereof and should only be used as such. The important thing to remember for good referencing is to always be consistent.

In text Citation:

The ACM conference proceedings reference style makes use of numbers enclosed in square brackets within the text. This number corresponds to the reference list found at the end of the chapter where the references are arranged alphabetically by Author’s last name and sequentially numbered. For example:

According to Donner, access has become a lot easier than it was 20 years ago. [1]

Reference list:

Below are some examples of reference types using the ACM citation style:

Book:

Chapter in a book:

Chapter in an edited book:

Article within a journal:

Electronic Journal Article

Electronic Journal Article with DOI:
A paper in Conference Proceedings:

Article on a website:

Website:

Below are the references used for the compilation of these guidelines:
